

Aged Care

Agile Energy is redefining how Australian businesses power their operations. As one of the country's fastest-growing commercial & industrial renewables energy company, Agile Energy delivers industry specific solutions.

Agile Energy delivers decarbonisation and affordable energy solutions through a tailored solutions which includes the fully-funded, onsite & zero-capex Power Purchase Agreements (PPAs). Projects are designed to integrate seamlessly with business operations and minimise disruption whilst securing reliable and affordable energy.

With over 50 MW of long-term solar and battery assets deployed nationally, Agile energy is backed by two major institutional investors: the Clean Energy Finance Corporation (CEFC) and Five V Capital. Their support provides the scale and certainty to deliver bankable, reliable, and future-ready renewable solutions.

Backed by Australia's Most Credible Clean-Energy Investors:

Australia's \$33+ billion clean-energy investment fund

Mandated to accelerate national decarbonisation

Supports reliable, long-term energy infrastructure

One of Australia's leading private-equity firms

\$3.3+ billion in funds under management

Proven track record in scaling high-growth Australian businesses

Our Differentiators

Commercial & Industrial Specialists
deep capability in your industry across small, medium and large sites

National Delivery Network
proven delivery on complex, multi-site portfolios

Long-Term Performance
ongoing operations, optimisation and asset management

Bankable Structure
fully funded by tier-one institutional capital

Customer-First Delivery
engineered for reliability, cost savings and smooth implementation

Understanding Your Business & Industry

Aged care providers continuously maintain safe, comfortable and uninterrupted living environments for residents. Energy is central to this responsibility, as these facilities operate around the clock to support the delivery of essential services.

Resident wellbeing is compromised when rising electricity prices disrupt the delivery of essential services such as:

- HVAC systems
- commercial kitchens
- laundry operations
- equipment

When aged care facilities rely solely on grid electricity, rising and unpredictable energy prices place pressure on operating budgets and create risk around the consistent delivery of care services, particularly in centres that provide medical support.

In this context, alternative energy procurement models, such as on-site solar generation, are increasingly relevant for aged care providers seeking greater cost stability and operational certainty without compromising resident care.

*Aged Care facilities are moving toward solar and battery **Power Purchase Agreements (PPA)** with Agile Energy to ensure their solar plan is cost efficient and a strategic pathway to cleaner, more stable production.*

PPAs Provide:

Lower and more stable energy costs

Protection against power disruptions when paired with batteries

Predictable long-term pricing for better budgeting

Immediate, trackable emissions reductions

No upfront capex investment to access renewable energy

Reduced exposure to energy price spikes & market volatility.

Case Study:

Evermore Living, a 24/7 aged care facility, sought a long-term energy solution that could reduce operating costs and improve resilience without disrupting resident care.

Operating around the clock, the site faces constant energy demand from critical services such as heating and cooling, medical equipment, kitchens, and laundry operations. Maintaining uninterrupted service while managing rising energy costs presents a material operational challenge, particularly when integrating with existing backup generation.

Agile Energy worked closely with Evermore Living to design a solar solution that could be installed safely within a live aged care environment.

The installation was engineered to address structural constraints, site access limitations, and the need to stage works around ongoing operations, ensuring resident care and safety were never compromised.

Delivered under an Agile Power Purchase Agreement, the solution provides Evermore Living with long-term energy certainty, reduced reliance on the grid, and the ability to support sustainability objectives — all without upfront capital expenditure or operational risk.

Facts:

The system generates approximately **400 MWh** of clean electricity each year, materially reducing grid reliance.

Every kilowatt-hour generated directly offsets grid electricity consumption, lowering long-term energy costs.

The project consists of a **277 kW roof-mounted solar system** designed for continuous aged care operations.

The solar system was fully integrated with the existing on-site generator to maintain operational resilience and compliance.

Evermore Living invested **no upfront capital**, with the system delivered under a fully funded PPA

All operations and maintenance are covered for the full PPA term, removing performance and maintenance risk from Evermore Living.

At the end of the PPA term, ownership of the solar asset transfers to Evermore Living for **\$1**, delivering long-term value beyond the contract.

Partnering with industry experts

Aged care providers face rising energy costs, ever-changing regulations, and the ongoing challenge of maintaining high-quality care for residents. They often have limited internal resources to manage operational risks, while simultaneously being under pressure to reduce overheads without affecting frontline services.

Agile Energy lessens these pressures by providing *long-term price certainty*, access to *renewable generation*, and *increased overall energy resilience* in a manner that avoids any upfront capital burden.

This leads to more resilient facilities, allowing management to focus on delivering high-quality care without being disrupted by energy risks or rising costs.
